

SPLASH MATH! A Great app for 3rd grade students who want to get extra practice with their math skills. Students can work on a number of different topics such as place value, geometry, addition, subtraction, money and many more. Some min features of the app are that it has interactive content where students must drag and drop the shapes, pop bubbles, move clock hands. The best part of the app is that it starts at an easy level and based on the students answers gets progressively harder.

Splash Math is available for all grade levels and contains a massive amount of content.
